Radiation Safety Officer - Certifying Course: Industrial Radiography

In radiation practices subject to a safety licence, the undertaking shall appoint a radiation safety officer and, if necessary, a deputy.

The task of the radiation safety officer is to take care of the implementation of radiation protection as assistance to the operator.

This training qualifies you as the radiation safety officer in the field of expertise in industrial radiography. Training is also suitable as continuing professional development for those already working as Radiation Safety Officers. The continuing training requirement is 10 hours over a five-year period

In addition to two days of contact teaching and a written examination, the training includes a pre-assignment and a post-course assignment to be submitted after the course. The certificate of competence is issued only after all components have been successfully completed.

A typical application area within this field of expertise is the radiographic inspection of welds.

Kenelle koulutus sopii?

future radiation safety officers
for those who need supplementary training (at least 10 hours in total over a five-year period is required)

Koulutuksen sisältö

pre-course practice assignment
nature and properties of radiation
radiation measurement and dose calculation
biological effects of radiation
calculations and other exercises
radiation legislation
radiation safety in industrial radiography
best practices in industrial radiography
exercises
written examination
post-course assignment

Wednesday 18.11.2026
08.45–17.00

Thursday 19.11.2026
08.15–17.00

Course instructors:

Radiation Safety Expert Lasse Rantanen, DEKRA Industrial Oy
Radiation Safety Officer Ilkka Lassila, Taitotalo
